IPeria Expands Operations to Asian Market

Company Opens Offices in China, Japan and Singapore, Signs Distributor Agreements, and Promotes James E. Daresta to Regional Vice President

Burlington, MA – April 11, 2001 – IPeria Inc., a leading provider of carrier-class communications software solutions, announced today it has expanded operations in Asia by opening offices in three of Asia’s largest telecommunications markets. The company also signed distributor agreements with Teledata (Singapore) Limited and Plexus Technology Pte Ltd, and has promoted James E. Daresta to regional vice president, responsible for sales and business development to the Asian market.

The new IPeria offices are located in Beijing, Tokyo and Singapore, three of the highest telecommunications growth markets in Asia. IPeria is staffing each location with a combination of its own employees and third-party network service partners to sell and support the IPeria™ ActivEdge™ Enhanced Communications System. In addition, IPeria has signed distributor agreements with Teledata (Singapore) Limited and Plexus Technology Pte Ltd to sell and market ActivEdge to carriers in Singapore and throughout Southeast Asia.

“We see the Asian market as important to the future growth of IPeria,” said Richard Connaughton, president and CEO, IPeria. “I am confident that our ActivEdge system will be well-received by the carriers in this fast-growing market.”

IPeria also promotes James E. Daresta to regional vice president responsible for sales and business development in the Asian markets. Daresta joined IPeria in June 2000 as director of sales.

“I would like to congratulate Jim on his promotion and I am looking forward to much success in the Asian region,” said Connaughton. “Jim has been instrumental in establishing IPeria’s growing presence in Asia by working closely with carriers and partners in this region.”

About ActivEdge Enhanced Communications System

The IPeria ActivEdge Enhanced Communications System is an open, carrier-class software and services infrastructure that supports both PSTN and VoIP networks. ActivEdge enables communications service providers to generate significant incremental revenue by delivering quickly to their subscribers a completely new class of next-generation services. Through its unique I-account user interface, ActivEdge delivers a wide range of subscriber-provisionable services including those most often associated with unified messaging, such as single-point access for voicemail, email, facsimile, paging and other messaging services. The I-account interface also creates a new marketing channel through which service providers can brand, customize and deploy services to subscribers. Designed for use in next-generation IP-based public networks, ActivEdge provide pre-packaged features ideally suited for use by facilities-based CLECs and Internet telephony providers, which must brand and differentiate their service offerings.

About IPeria Inc.

Founded in 1997, IPeria is the leading developer of an application server and subscriber applications that enable telecommunications service providers to attract and retain customers. Its innovative ActivEdge Enhanced Communication System provides voice mail, unified messaging, voice e-mail and other high-value subscriber services. Service providers use the IPeria I-account user interface of the ActivEdge system to build strong, long-term relationships with their customers by allowing customization and personalization of the services. Privately held, IPeria is headquartered in Burlington, Massachusetts. Additional information is available at <http://www.iperia.com>.
