

**FOR IMMEDIATE RELEASE**

**NETSANITY CHANGES NAME TO SOLTIMA**

*Re-launches as provider of content management solutions for wireless operators*

**Campbell, CA. (June 18, 2000)** – Netsanity, Inc. today announced that it has changed its name to Soltima, Inc., and that it will focus on providing content management software and services to wireless operators. Soltima’s solutions will allow wireless providers to dramatically expand the range of content streams and services offered to their customers, while making it easier for customers to access and use their favorite wireless services.

Under the new name of Soltima, the company will offer wireless operators a unique approach for cost-effectively adding content and services. Using Soltima’s PublishML™, an operator can adopt an XML-based open publishing standard, and promote the creation of content and services by thousands of commercial publishers and developers. With the Wireless Publishing Platform™, a vast range of content and services can be integrated, provisioned, and managed on a single service platform. Soltima also provides solutions to help operators create service packages and enable end users to personalize their service experience.

“Soltima’s new mission is to help service providers create a wireless world in which customers can choose from a huge variety of available content and services, yet quickly access the services they want,” said Don Warkentin, Chairman and CEO. “We help wireless operators scale their services offerings in a way that dramatically reduces cost and complexity when compared with other approaches. Our goal is to help them configure service packages and offers targeted at specific market segments.”

-more-

Soltima will help publishers and developers to address a huge new market with an approach that enables them to develop content once, and have it available for integration with multiple wireless presentations, including SMS, WAP, Voice, i-Mode, and other formats.

“We help provide end customers with a vast choice of content and services, presented in a manner optimized for the device they are using,” said Warkentin. “All of this adds up to a much richer and more satisfying user experience than is typical today.”

**About Soltima (formerly Netsanity, Inc.)**

Soltima, located in Campbell, CA, is a global provider of wireless infrastructure software and services. We help leading service providers create a wireless world in which customers can choose from thousands of services, and quickly access their favorites. Soltima’s solutions are essential elements in a best-of-breed service provider architecture. They run on industry-standard hardware and have open interfaces to existing presentation software solutions, billing systems, and monitoring systems.
