

KABIRA AND VOLUBILL ENTER OEM AGREEMENT

London - UK - 21th October 2003, Kabira Technologies, provider of the Infrastructure Switch(tm) software for convergent network and real-time financial services, and VoluBill, leading provider of Mobile data, content and MMS charging solutions, today announced they have entered into an OEM agreement.

In this agreement, VoluBill will use Kabira's Infrastructure Server to enhance the functionality of VoluBill's Dialog Control and Charging Platform (D2CP). This will speed its integration into customer environments, allowing VoluBill to provide mobile operators with the widest possible range of convergent service and content charging options for their customers, and will also lead to greater interoperability between closely coupled functions, such as balance management, subscription management, and rating with service delivery.

The two companies already have a joint marketing partnership offering mobile service providers a one-stop shop for mobile data charging solutions. This new OEM agreement builds on the original agreement, meaning customers will benefit from even closer integration between Kabira's telecom solutions in areas such as service creation and deployment, and VoluBill's content mediation platform for wireless data services, such as SMS, MMS, WAP and 3G.

Serge Dugas, vice president, central and southern Europe, Kabira Technologies said: "Mobile data is fast becoming a major revenue generator for mobile operators who want service activation, provisioning and billing solutions that are seamlessly integrated, robust and work in real time. This new dimension to our partnership with VoluBill will see a truly convergent approach to our customer's OSS & BSS needs."

Nicolas Bouthors, Chief Technology Officer of VoluBill, said: "We are very happy with the response we have seen from the combined Kabira/VoluBill offering. Now we want to build on that success and offer operators a fully convergent approach to meeting the challenges of a wide variety of prepaid and post-paid data and content services. VoluBill has been a pioneer in the field of data and content charging, and our evolving relationship with Kabira will allow us to better help operators introduce the innovations needed to increase data revenues while keeping costs down."

About VoluBill

VoluBill provides in-flow GPRS data and MMS charging solutions to the telecommunications industry worldwide. VoluBill has pioneered the technology of session control for wireless data, content and messaging and holds numerous patents for this capability. VoluBill's technology platform, D2CP, is the world's first and most complete in-flow content charging solution.

VoluBill's charging solutions enable a rich set of subscription and usage-based pricing schemes that enhance operator revenue opportunities and are easy to understand for subscribers. VoluBill products integrate with the operator's current infrastructure, enhancing the functionality and ROI for billing and mediation systems and core network components such as GGSNs.

Operators deploying VoluBill solutions can implement true no-leakage prepaid with full featured, in-advance charging for data and messaging prepaid users. VoluBill access control and dialogue management functions enable operators to extend their line of data and messaging products to prepaid customers in WAP, HTTP, and i-mode environments.

About Kabira Technologies Inc.

Kabira Technologies' software makes 'Real-Time Everything' a reality. Real-time financial transactions are increasing in volume and complexity. Mobile communications now combines voice, messaging and multi-media. Because of the instantaneous response needed for these systems, existing batch processes and offline settlements will become obsolete. As providers of financial and telecommunications services move to 'Real-Time Everything', they hit a wall - their systems and software are not fast enough, robust enough or flexible enough to keep up with customers. Kabira's software breaks down 'the wall'.

Kabira makes the software Infrastructure Switch and solution frameworks for providers of high-speed, high volume, Real-Time Everything services. Our software products for wireless, Parlay OSA Gateway, Message Gateway, telecom and financial services are built on the world's most advanced infrastructure software - delivering solutions of

unparalleled Speed, Flexibility and Scalability. With customers in more than 30 countries, Kabira's solutions are proven to scale to tens-of-millions of users and are designed for continuous modification directly from high-level models and frameworks. Visit our website www.kabira.com/.
