

Kabira's Flexibility and Scalability Key Selection Factors for PTK Centertel

January 19th 2005

SAN RAFAEL, Calif.—Kabira Technologies, Inc. today announced that PTK Centertel, Poland's fastest-growing digital mobile service provider, is the latest major operator to be utilizing Kabira's 3G service provisioning and service activation solution (KPSA) and its underlying technology KIS (Kabira Infrastructure ServerSystem) to activate next-generation services. PTK Centertel has chosen Kabira for its ability to handle high-volume provisioning transactions, as well as support its carrier-grade service delivery infrastructure to achieve current and future targets in subscriber activity and service roll-out.

"The introduction of KPSA in our IT architecture represents a key building block for successfully deploying cutting-edge services within the France Telecom group, our local IT team and our local partners, and still handle unexpected increases in traffic volume," said Mr Philippe Salin, Technical Director, PTK Centertel. "Even before full completion of the Kabira implementation, we were already launching new network features to respond to local market demands."

Marketed under the Idea brand and partly owned by France Telecom, PTK Centertel has taken the lead in the Polish mobile market, successfully introducing new multimedia real-time services and serving more than seven million customers. The substantial growth in subscribers combined with the launch of strategic 3G services has led PTK Centertel to review its provisioning infrastructure.

By leveraging the Kabira's 3G service provisioning and service activation solution and its underlying technology KIS, PTK Centertel is poised to achieve the flexibility and scalability to handle the massive growth of provisioning flows. As an entirely open, vendor and technology-agnostic system, the Kabira platform also enables easy and strong integration with the existing IT and network infrastructure, as well as new IT and network equipment.

"By implementing our KIS technology and the leading next generation provisioning solution, PTK Centertel now holds the right assets to strengthen its leading position in the Polish market and can build the crucial architecture needed to achieve a high performance 3G real-time environment," said Serge Dugas, Vice President Central and Southern Europe, Kabira.

About Kabira Technologies Inc.

High Volume Transaction Leadership: Kabira offers the World's Fastest Switching Software for Real-Time Services. Our customers require unique speed, scalability, transactionality and business model flexibility for their mission-critical systems. Headquartered in San Rafael, California, Kabira has been installed and widely adopted by over 70 leaders in telecommunications, financial services and government sectors in more than 30 countries.

Kabira's Model Driven Architecture combined with rigorous development processes reduces risk, time to market and on-going support costs by up to 80%. Global partners include Accenture, Capgemini, EDS, Hewlett-Packard, Hitachi, Mitsui, Motorola, Nokia, Sun, Unisys and Visa.
