

ProQuent Announces Integration with Openet Telecom's real-time content charging solution, FusionWorks Mediation.

ProQuent Systems and Openet Telecom to deliver real-time solutions to address the need for total flexibility in creating next generation charging models to inappropriate, indecent and offensive content

Marlborough, Massachusetts - March 2, 2004 - ProQuent Systems, a leading provider of intelligent mobile data infrastructure and Openet Telecom, a world leader in real-time charging, convergent mediation and rating, today announced that they have integrated and tested content charging solutions targeted at the mobile IP billing market.

The combined solution integrates Openet's FusionWorks™ ActiveCharge™ solution with the ProQuent MSSP application delivery and management platform. The ProQuent MSSP uses patented IP Detection Point™ technology to perform real-time monitoring and content discrimination of all users' IP data sessions at full wire speed. Openet was able to use the ProQuent open API to easily enable this integration.

ProQuent's patented IP Detection Point™ technology allows complete classification, layer 2 through 7, of IP data traffic without adding any latency to the subscriber flow. IP detection points are provisioned by the use of regular expressions allowing recognition of patterns in the IP data flow at both broad and highly granular levels. The use of IP Detection Point™ technology allows the translation of protocol messages into real-time events which can be used to report subscriber activity to applications, such as FusionWorks ActiveCharge, or serve as a trigger point to invoke service logic. The translation occurs irrespective of whether the content is hosted by the operator or comes from the public internet, providing the operator with total visibility and control of subscriber traffic.

FusionWorks ActiveCharge is a fully scalable Real-time Charging Solution that enables operators to deliver any service, to any type of subscriber, over packet data networks and ensure that the services are charged for by any payment method in real-time before delivery actually takes place. FusionWorks ActiveCharge enables service providers to manage the growing complexity of their business infrastructure - including the collection of subscriber usage information, the integration of new and legacy billing systems, event-based transaction pricing and management, content-based charging, customer care, data warehousing, fraud management and other related applications.

"These two cutting-edge products fundamentally change the game relative to introducing new charging schemes. The MSSP provides real time charging events to the FusionWorks engine where dynamic and flexible mediation rules can be applied," said Tom Hamilton, CTO and Founder ProQuent Systems. "The configurability of both products enable new degrees of freedom for creating service packages and premium services, allowing the operator to generate new revenue streams.

"Openet is excited about the opportunity to work with ProQuent to meet the growing need of mobile operators for scalable, economical and highly flexible solutions to address the elusive IP billing data opportunity," said Joe Hogan, CTO and Founder Openet Telecom. "The combined products empower operators to implement the billing models of tomorrow."

About ProQuent Systems

ProQuent® Systems is a leading provider of intelligent mobile data infrastructure. The company's flagship product, the ProQuent Mobile Services Switching Point™ (MSSP™) 2820 is a carrier-class, multi-service platform for deploying and managing applications on mobile networks.

ProQuent ACCESS (Authorized Content Control & Electronic Subject Screening) is the only commercially-available solution for operators looking to actively enforce mobile content and access control policies in real-time. With

ProQuent ACCESS, mobile network operators can filter out and control customer access to inappropriate, indecent and offensive content.

ProQuent TollGate Mobile provides a complete solution suite for IP billing in wireless data networks, both for prepaid and postpaid. The core of the solution suite is the ProQuent MSSP, an open services platform that introduces a service switching and control function into IP networks - giving operators full visibility and full control over subscriber data sessions in real-time.

ProQuent BitCapture Mobile provides mobile operators the ability to collect highly granular and detailed user and usage information on subscribers, applications and services in a mobile data network. The collected information can be viewed using built-in and third party reporting tools.

ProQuent Systems is headquartered in Marlborough, Massachusetts, with regional sales offices located in the US, Europe and Asia. For more information about ProQuent please visit www.proquent.com or e-mail: info@proquent.com.

About Openet

Established in July 1999, Openet Telecom is a world-leading provider of real-time revenue generating solutions that enable network operators to maximize the profitability of their network and services. Our products, FusionWorks Mediation, FusionWorks ActiveCharge and FusionWorks ActiveRate enable network operators with diverse networks to easily implement, manage, charge for, rate and bill sophisticated services - leading to enhanced profitability and quality of service.

With headquarters in Dublin, Ireland and offices in Reston VA, London, Paris, Rome, Madrid and San Francisco, Openet Telecom has signed customers that include Verizon Wireless, British Telecom, Orange Group and Telecom Italia Mobile.
