NuVox Communications Selects Sylantro for VoIP Service Offering

New VoIP Key Component of NuVox's 2005 Growth Strategy

At VON Spring 2005, SAN JOSE, Calif., March 7, 2005 – Sylantro Systems Corporation today announced that NuVox Communications has chosen the Sylantro applications feature server platform as the foundation for a new VoIP-based service offering. The new service allows NuVox to offer a truly integrated, future-proof communications option for its business customers in its 16-state footprint.

By using Sylantro's application feature server in its network, NuVox is able to deliver feature-rich services to its customers over flexible IP access connections, with dynamic allocation of bandwidth. The NuVox service will be offered in a variety of packages, ranging from basic integrated-access service to advanced network-hosted services. These packages will support analog, digital, or IP phones, and will ensure compatibility with the customers' existing and future network designs.

“Many of our customers and prospects have recognized the value of VoIP technology and would like to see more efficiency in their bandwidth allocations. At the same time, they cannot absorb expensive upgrades to equipment and do not want to hassle with compatibility issues,” said Penn Gaines, vice president of marketing for NuVox Communications. “The Sylantro applications feature server gives us a scalable, carrier-grade platform from which to deliver these voice and data services to our customers, now and in the future.”

“We are very happy that NuVox, one of the nation’s leading super-regional competitive communications companies, has standardized on the Sylanro platform to allow existing and new customers to migrate to advanced VoIP capabilities,” said Pete Bonee, president and CEO of Sylanro Systems. “NuVox is well known and respected as an innovative company that is very responsive to its customers’ needs and requirements. Through the Sylanro solution, NuVox is now bringing flexible, affordable VoIP features and functionality to a broad and diverse customer base.”

Sylanro Systems is the leading provider of hosted PBX and IP Centrex applications and consumer broadband applications via the company’s carrier-grade feature server. Sylanro’s products are successfully deployed around the globe with the widest market distribution in its product class. The Sylanro platform provides the telco-grade scalability, reliability, operability, and regulatory compliance required for massively scalable carrier deployments to serve millions of users.

About NuVox Communications

NuVox Communications is a privately held Integrated Communications Provider (ICP) offering a full array of communications services for business customers including data, Internet, voice, and other advanced communications solutions. The company serves over 41,000 business customers across Florida, Georgia, South Carolina, North Carolina, Tennessee, Alabama, Kentucky, Mississippi, Louisiana, Arkansas, Oklahoma, Kansas, Missouri, Illinois, Indiana, and Ohio. On the Web: www.nuvox.com.

About Sylanro Systems Corp.

Sylanro Systems provides the premier software platform for advanced IP Centrex and hosted communications services for business, residential, wireless and other applications. The company leads the market in deployments, with carriers such as SBC, PTTs such as TeliaSonera, and next-generation service providers such as NuVox and Covad using the Sylanro platform. With a unique combination of advanced applications, a carrier-class platform, and proven go-to-market services, Sylanro allows service providers to rapidly deliver high-value, high-margin managed telephony services. These award-winning solutions offer business users sophisticated communications services without the cost and complexity of today’s in-house PBX and key systems, and give consumers new flexibility in their communications services. Sylanro is a privately held company backed by premier investors. On the Web: www.sylanro.com.
