Bandwidth.com Standardizes on Sylantro Platform for Nationwide Business VoIP Service Offering

Nationwide Provider of Business Internet Access Deploys Sylantro Applications Feature Server to Deliver IP Centrex Services for Businesses

At VON Spring 2005, SAN JOSE, Calif., March 7, 2005 – Sylantro Systems Corporation today announced that Bandwidth.com, a leading national provider of high-speed Internet access for businesses, has selected the Sylantro applications feature server to power the company's BandwidthVoice hosted Voice over IP (VoIP) service. Bandwidth.com serves more than 3,000 business customers nationwide as a single source for purchasing, deploying and maintaining advanced Internet and voice business products.

The Sylantro applications feature server provides a full range of PBX-type features, as well as advanced features such as simultaneous ringing, find me/follow me, distinctive ringing, and browser-based control of personal and company-wide communications features. The Sylantro solution also provides full integration with Microsoft Outlook messaging software, including synchronization of contacts lists and access to Sylantro-based options through a toolbar. Further, the BandwidthVoice service can connect multi-site company locations and remote employees with a single dialing plan, creating a virtual campus environment with intra-company 4- or 5-digit dialing and forwarding of calls and voice messages.

"The Sylantro solution complements our existing line of services with advanced hosted PBX capabilities, a flexible, affordable and scalable alternative to premise-based phone systems," said David Morken, president of Bandwidth.com. "Through the Sylantro platform, we are able to offer our customers enterprise-class VoIP features and services that reduce their overall costs,

streamline administration and improve productivity, with the assurance of a telco-grade, reliable and scalable foundation.”

“Bandwidth.com has built a fast-growing business upon a philosophy of providing the widest service availability, guaranteed best prices, and superior pre- and post-sales support for high-speed Internet access,” said David Illing, senior vice president of marketing and business development for Sylanro Systems. “Through the Sylanro applications feature server, Bandwidth.com is expanding their service offerings to provide a single point of contact for all of the vital communications services that businesses require.”

In addition to the Sylanro applications and servers, the BandwidthVoice service incorporates IPeria’s ActivEdge unified communications applications for advanced integrated messaging services, Convedia’s media server products, and session border control solutions from Kagoor Networks. The combined Sylanro/Convedia/IPeria/Kagoor solution allows rapid deployment of best-of-breed carrier-grade solutions for hosted communications services.

Sylanro Systems is the leading provider of hosted PBX and IP Centrex applications, voice VPN capabilities and consumer broadband voice applications via the company’s carrier-grade applications feature server. Sylanro’s products are successfully deployed around the globe with the widest market distribution in its product class. The Sylanro platform provides the telco-grade scalability, reliability, operability and regulatory compliance required for massively scalable carrier deployments to serve millions of users.

About Bandwidth.com

Over the past five years, Bandwidth.com has revolutionized the acquisition of Internet access for small to medium sized businesses. As the market-leading intermediary between telecom providers and customers, Bandwidth.com has created a new way for businesses to purchase Internet access. Through its relationship with leading telecom providers, Bandwidth.com offers unparalleled selection, price and service. The company’s unique methodology and experienced team ensure accountability and service superior to traditional Internet access providers. For more information, visit www.bandwidth.com.

About Sylanro Systems Corp.

Sylanro Systems provides the premier software platform for advanced IP Centrex and hosted communications services for business, residential, wireless and other applications. The company leads the market in deployments, with carriers such as SBC, PTTs such as TeliaSonera, and next-generation service providers such as Bandwidth.com and Covad using the Sylanro platform. With a unique combination of advanced applications, a carrier-class platform, and proven go-to-market services, Sylanro allows service providers to rapidly deliver high-value, high-margin managed telephony services. These award-winning solutions offer

business users sophisticated communications services without the cost and complexity of today's in-house PBX and key systems, and give consumers new flexibility in their communications services. Sylanro is a privately held company backed by premier investors. On the Web: www.sylanro.com
